#### Introduction

### The idea behind the project

#### New protocol

- Two global laser pulses (with the laser phase of the second pulse shifted by  $\xi$ ) of the same length  $\tau$  and detuning  $\Delta$  couple  $|1\rangle$  to  $|r\rangle$  and drive nearby atoms within the Rydberg blockade regime [?].
- Neighboring atoms cannot be simultaneously excited to the Rydberg state according to the Rydberg blockade.

#### **Conclusions**

# Thank you for the attention!
